Digital Creations

Smart Home Supplies is a web-based affiliate e-commerce platform I developed to demonstrate my ability to design and deploy functional, user-friendly websites. The site organizes a wide range of product categories — including home improvement, kitchen and dining, beauty and personal care, pet supplies, and school supplies — and integrates Amazon affiliate links for monetization. It features a structured layout with product reviews, testimonials, and a clear call-to-action flow to guide users toward purchases. By focusing on responsive design, intuitive navigation, and clean visuals, I created a project that balances technical implementation with real-world business application.

Rentflix Movies is a design and front-end prototype for an entertainment discovery platform that aggregates media such as movies, TV series, anime & manga, and video games in one place. The site organizes content into logical sections — “Popular,” “Upcoming Movies,” “Ongoing & Upcoming TV Series/Anime,” etc. — making it easy for a user to find what’s new, trending, or on the horizon. Visually, it features poster-style thumbnails, consistent “Watch” call-to-action buttons, and a clean, grid-based layout. Even though much of the descriptive text is placeholder content (e.g. *Lorem ipsum*), the design demonstrates strong attention to UI layout, user navigation, and content categorization. This

project highlights my capabilities in front-end development (HTML/CSS/JS), designing for media-rich content, and creating prototypes suitable for streaming or media catalogue applications.

Kuromi TV is a prototype entertainment-site I developed for anime enthusiasts, merging trailer content with merchandise affiliate offerings. The platform features sections for "Featured Trailers" (e.g. *My Hero Academia Final Season*, *Chainsaw Man – Reze Arc Movie*), detailed affiliate product suggestions (figures, trading cards, themed merchandise), and a clean navigation system including "Home", "Watch", and "Anime Details". Built with visual hierarchy and user engagement in mind, it uses large banners, intuitive links, and affiliate integrations with Amazon and eBay. This project showcases my skills in front-end web design, content organization, branding, and implementing monetization strategies for niche content communities.

These projects highlights my skills in HTML, CSS, JavaScript, and web publishing through GitHub Pages.
